

BROW HEALING PROCEDURE

Day 1

I Love My New Brows
Thank U!! Thank U!!

Day 2-4

I don't like the color...
It's 2 Dark!!

Day 5-7

Yikes! My Brows are
scabbing & falling off.

Day 8-10

Oh no!
My Brows are gone

Day 11-14

Finally! My Brows are
coming back. Still look
patchy!

Day 30

After 2nd Procedure

My Brows look so
Natural & Real.
I Love Them!!

Day 1-2

What you see is about 20-40% darker, bolder and more solid than what your healed result will present. Under the pigment, the skin is red and pigment has been deposited into the layer of skin containing dead skin cells; combined giving the appearance of darker color. There may be minimal swelling but because typically the eyebrow area does not retain much fluid, swelling will be limited.

Day 2-3

The top layers of skin will begin to shed, and you will see a loss of color. This is normal, and the pigment that was deposited superficially will come off with the skin it is embedded within. **DO NOT HELP IT!** Let it peel on its own. To pull the skin off, you will remove 'plugs' of dermal pigments as it has not detached itself completely at this point.

Day 3-4

Your eyebrows may begin to itch and the pigment may appear somewhat raised. **Don't scratch them.**

Day 4-7

The skin is now going through rapid exfoliation and if left alone, will shed evenly.

Day 8-10

The color under the exfoliating skin will continue to appear light until the epidermis takes on its more transparent characteristics.

AFTERCARE INSTRUCTIONS

2 WEEKS CARE

1. Aftercare cream: Apply every 4-6 hours for 2 weeks or until 2 packages are all used. Apply last application right before going bed and no need to wake up during sleeping.
2. Plastic Face cover should be used first 2 days when taking shower. This will prevent water getting on the brow area (Alcohol pads are included so that you can wipe your forehead before applying the face protection). Plastic cover will not stick on oily and/or dusty skin.
3. Wash your hands before touching treated area. Cotton-tipped applicators may be used to gently cleanse the eye area. Do not expose the area to dirty or unsanitary conditions.
4. Do not pick, peel or scratch the treated area or your color may heal unevenly and you risk scarring and infection.
5. No skincare products: Skin creams, ointments, or lotions other than what you have been instructed to use for 2 weeks following your procedure.
6. No direct sun, tanning beds, self-tanner
7. No hot tubs, bath, sauna, salt water, chlorinated pools
8. No hot yoga, excessive workout

LONG-TERM CARE

1. Use a good sunscreen daily. Sun exposure will fade your permanent cosmetics and may cause irritation even years later.
2. If you are planning chemical exfoliation, MRI, or other medical procedure, please inform your physician of your cosmetic tattoo.
3. If you donate blood, it is a Red Cross policy that you must wait one year after any tattooing procedure. In unregulated states – check if restrictions apply to you.
