

## **EYELINER HEALING PROCEDURE**

Day 1

I love my eyeliner but my eyes look little puffy!

**Day 1**

Swelling may vary from slightly puffy to swollen, heavy lids. You may experience light sensitivity and eyes may appear bloodshot. Eyelids may feel more swollen than they actually appear. Eyeliner may look intense. Be sure to sleep with your head slightly elevated to help reduce swelling. Use a clean pillowcase.

Day 2

Oh no... Eyes are swollen!!

**Day 2**

Eyes may be swollen and a bit 'crusty' upon waking. (The swelling will disappear from being in an upright position and from blinking, etc., which increases circulation to the area.) Avoid heavy lifting, physical exertion, and crying.

Day 3

Eyes feel better but feeling a little itchy...

**Day 3**

Eyes will be less swollen, but skin may feel tight. The lash area may feel sore if touched.

Day 4

Pigment flaking, what should I do?

**Day 4**

In some cases, pigment within the epidermis may begin to flake off in little stitch looking lines. *DO NOT PICK- you may pull deeper, DERMAL pigment off and end up with an uneven color.*

Day 5

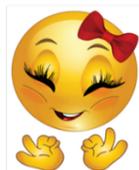

Almost healed...

**Day 5**

Blinking may help eliminate small pieces of pigment and epidermal cells that have detached/ naturally exfoliated off. *It is important not to pick at it or rub the eyes!*

Day 7

My eyeliner looks amazing...  
I Love Them!!

**Day 7**

All shedding will likely be complete. You may return to regular shower habits.

## EYELINER AFTERCARE INSTRUCTIONS

Please keep these instructions and refer to them as necessary.

Proper home care following your procedure is necessary to achieve your best results.

Please keep in mind that some unevenness of color is to be expected, and will be addressed during your touch-up visit. Should you have questions or concerns during the healing process, please contact your technician, Cecilia Lim, at 206.900.6972.

1. Aftercare cream should be used every 4-6 hours. Using cotton swab provided, apply a very thin layer of aftercare cream. Repeat until the natural exfoliation/scabbing process is complete, or until two after care cream packages are used.
2. For the two days following your procedure, protect treated area when showering by using provided plastic eye shield.
3. Wash your hands before touching any treated area.
4. To reduce swelling, apply an ice pack wrapped in a clean tissue or cloth. Apply ice pack in fifteen-minute increments (15 on, 15 off, etc.)
5. Sleep with head slightly elevated to reduce swelling.
6. Cotton swab should be used to gently cleanse the eye area. Do not expose the area to dirty or unsanitary conditions. Wearing glasses outdoor is a good way to protect new eyeliner from dust, etc., that can stick to healing agents. Apply recommended healing agents sparingly.
7. Some itching is normal. **DO NOT PICK, PEEL, OR SCRATCH** the treated area, as it may cause your color to heal unevenly, and you may risk scarring and infection.
8. Do not apply makeup for 72 hours after the procedure. When using makeup, be sure to use a fresh, new tube of mascara. Do not use an eyelash curler for two weeks.
9. Do not expose treated area to direct sun, tanning beds, hot tubs, saunas, salt water, chlorinated pools, direct shower spray, hot water for two weeks, or until fully healed.
10. For 2 weeks following your procedure, do not apply any skin creams, ointments, or lotions other than as instructed.
